 - 适合强力切削，回转及进刀量是一般铣刀的3倍
  - 适配刀片经济，性价比高。
- ★ Suitable for heavy cutting, rotary and feed volume is 3 times the normal cutter.
- ★ Adapter blade economy, cost-effective.

[illegible]

■ R390

直角台肩精铣刀  
Right angle shoulder fin

Right angle shoulder fine milling cutter

 切削参数 (Cutting Parameters): R15-R18  
零配件 (Spare Parts): P01-P04

- 精度高，适于精加工
- ★ High precision, suitable for finishing

### ■ R390 直角台肩面铣刀盘

### RightAngle Shoulder Milling Cutter

- 适配精磨刀片
- 精度高，适于精加工
- 锥形设计，钢性高

- ★ Adapter grinding Inserts
- ★ High precision, suitable for finishing
- ★ Cone design, steel high

### ■ R390 一体式高速强力方肩铣刀

### R390 Integrated High Strength Square Shoulder Milling Cutter

 切削参数 (Cutting Parameters): [R15-R18](#)  
零配件 (Spare Parts): [P01-P04](#)

- 一体式刚性结构，轻量化，更具高速性能。
- 通过选用不同材质刀粒，可适用于钢及铜铝合金的粗精加工，适用范围广，高效率，高刚性！
- ★ Lightweight one-piece rigid structure, high performance, more.
- ★ Through the selection of different material grain, can be used in the steel and copper aluminum alloy The coarse and fine processing, wide application range, high efficiency, high rigidity!

- 可用于插铣、平面、台阶面、槽加工
- 低切削力，大前角，切削轻快
- 产生率，高精度

- ★ Can be used to insert milling, flat, level surface, groove
- ★ Low cutting force, large rake angle, cutting light
- ★ High productivity, high-precision

- 一体式刚性结构，轻量化，更具高速性能。
- 通过选用不同材质刀粒，可通用于钢及铜铝合金的粗精加工，适用范围广，高效率，高刚性！

- ★ Lightweight one-piece rigid structure, high performance, more.
- ★ Through the selection of different material grain, can be used in the steel and copper aluminum alloyThe coarse and fine processing, wide application range, high efficiency, high rigidity!

### EMRW 圆鼻面铣刀盘

Round Nose Milling Cutter

- 使用15° 正角刀片
- 刀片经济，适用性强
- 容屑空间大，排屑好
- 锥形设计，钢性高

- ★ Using the 15° positive angle blade
- ★ Blade economy, the applicability of high
- ★ Capacity chip a large space, good chip disposal
- ★ Cone design, steel high

切削参数 (Cutting Parameters): R22-R24

### EMRM 圆刃立铣刀

Corner Rounding End Mills(EMRM)

- 圆刀片切削刃强度高
- 系列产品品种丰富
- 最适合模具材料加工

- Circular blade cutting edge strength is high.
- Series of products rich variety.
- The most suitable mold materials processing.

■ EMR 圆鼻立铣刀  
Round Nose End Mill

切削参数 (Cutting Parameters): R22-R24  
零配件 (Spare Parts): P01-P04

● 适配多种经济型刀片，性价比高。  
★ Fit a variety of economic-type blade, cost-effective

■ EMRW 圆鼻立铣刀  
Round Nose End Mill

● 刀片经济，适用性高  
● 容屑空间大，排屑好

切削参数 (Cutting Parameters): R22-R24  
零配件 (Spare Parts): P01-P04

★ Blade economy, the high applicability.  
★ Capacity chip a large space, good chip removal.

## ■ R200 圆鼻立铣刀

### Round Nose End Mill

👉 切削参数 (Cutting Parameters): R22-R24  
零配件 (Spare Parts): P01-P04

- 适配山特精磨刀片，精度更高，加工效果更佳。

★ Adapter Grinding Blade Sandvik, Higher Accuracy, Processing A Better Effect.

## ■ R200 圆鼻面铣刀盘

### Round Nose Milling Cutter

- 适配山特精磨刀片
- 精度，适于精加工
- 锥形设计，钢性高

 切削参数 (Cutting Parameters): R22-R24  
零配件 (Spare Parts): P01-P04

- ★ Adapter grinding blade Sandvik
- ★ High precision, suitable for finishing
- ★ Cone design, steel high

- 刀片经济，
- 容屑空间大

Figure 1-1-1 illustrates common mechanical processing methods and a technical drawing of a stepped shaft. The top row shows five icons for different processing techniques: 粗加工 (Roughing), 挖槽加工 (Pocket milling), 鑽、切、磨加工 (Drill, cut, grind), 台階面加工 (Shoulder milling), and 含平面的形加工 (Copy milling). Below these is a technical drawing of a stepped shaft with dimensions: outer diameter  $\phi D$ , inner diameter  $\phi d$ , total length  $L$ , and segment lengths  $L_1$  and  $L_2$ . The bottom right corner features a diagram showing the transition from a rough surface (粗加工) to a finished surface (精加工) with a tolerance zone (公差带) and a note: "注意：粗加工表面不得有 G 类或 H 类缺陷" (Note: Rough processing surfaces must not have G or H class defects).

■ TRS 圆鼻面铣刀盘  
Round Nose Milling Cutter

- 使用15° 正角刀片
- 刀片经济，适用性强
- 容屑空间大，排屑好
- 锥形设计，钢性高
- ★ Using the 15° positive angle blade
- ★ Blade economy, the applicability of high
- ★ Capacity chip a large space, good chip disposal
- ★ Cone design, steel high

切削参数 (Cutting Parameters): R22-R24

## ■ BCF/BCFL 球形立铣刀

### Spherical End Mill

BCF 型

BCFL 型

- 采用精密级刀片可得到高精度加工表面
- 刀片表面凸面设计，不仅刀刃锋利并可降低切削振动的噪音

- ★ Use of available high-precision machining precision blade surface.
- ★ Blade surface of convex design, and reduces not only the sharp cutting edge Vibration noise.

👉 切削参数 (Cutting Parameters): R25-R26  
零配件 (Spare Parts): P01-P04

## ■ SWB 球形立铣刀

### Spherical End Mill

 切削参数 (Cutting Parameters): [R25-R26](#)  
零配件 (Spare Parts): [P01-P04](#)

- 采用精密级刀片可得到高精度加工表面
- 刀片表面凸面设计，不仅刀刃锋利并可降低切削振动的噪音

- ★ Use of available high-precision machining precision blade surface.
- ★ Blade surface of convex design, and reduces not only the sharp cutting edge Vibration noise.

ABPF  
球形立铣刀  
Spherical End Mill

- 刀片安装面“V”型设计，使安装更加稳固。
- R部刃形螺旋设计，切削轻快、平滑，加工面粗糙度有保证。
- 刃口经过特殊处理，有优异的抗崩损性。
- The blade mounting surface "V" type design, make install more solid.
- R spiral blade design, fast, smooth cutting, machining surface roughness has a guarantee.
- Blade through special processing, have excellent resistance to crash damage.

■ T2139 球形精铣刀

 切削参数 (Cutting Parameters): R25-R26  
 零配件 (Spare Parts): P01-P04

- 采用高性能合金结构钢材
- 刀片切削刃锋利,可加工不同的材质
- 高精度保证其高性能,高速切削亦稳定

- ★ High-performance alloy structural steel.
- ★ Blade cutting edge sharp, can process different materials.
- ★ Precision to ensure its high-performance, high-speed cutting is also stable.

- 切削能力及精度均佳，排削好，高速切削稳定，有很宽的应用范围。  
可应用于模具用材料的精加工及燃气轮机叶片的制造。
- Cutting ability and precision are good, the row of cut is good, high-speed cutting stability, and has a wide range of applications.  
Can be applied to abrasive materials used in finishing and the manufacture of gas turbine blades.

### ASJ-4P 钻铣刀

Drilling and milling cutter

切削参数 (Cutting Parameters): R16  
零配件 (Spare Parts): P01-P04

- 无底孔状态下由钻孔加工至立铣加工
- 底刃刀片角度较大, 加工阻力轻
- 刀片为四刃, 可做深粗铣加工
- Bottom-free state from drilling to milling process.
- At the end of blade edge angle of greater resistance to light processing.
- Four-edge blade, do the deep rough milling.

### CH 螺丝沉头孔铣刀

Screw Countersunk Head Milling Cutter

切削参数 (Cutting Parameters): R16  
零配件 (Spare Parts): P01-P04

- 把传统的钻孔与沉头加工结合于一体, 一次加工完成, 大幅提高螺丝沉头孔的加工效率

# 倒角刀

机夹式倒角刀  
Machine clip chamfering cutter

[illegible]

## ■ SSP45° 定位倒角刀

SSP45° Positioning Chamfering

零配件 (Spare Parts): P01-P04

- 本铣刀可45° 切削，亦可做倒角，V槽切削，可中心定位钻使用
- 适合一般铣床，CNC铣床，CNC车床，钻床倒角

- ★ This cutter can be 45° cutting, chamfering can be done, groove cutting, drilling may be the use of central location
- ★ Suitable for general milling machine, CNC milling machines, CNC lathes, drilling chamfering

**TP30°/ 45°/ 60°**  
倒角刀  
Chamfering

● 可30°/45°/60°切削，亦可倒角  
● 适合加工中心及一般铣床用

★ Can be 30°, 45°, 60° cutting, can be chamfered.  
★ Milling machine for machining centers and general use.

### SSK-45° 舍弃式倒角刀

SSK45° Discarding Chamfering

- 本铣刀可45° 切削，亦可做倒角，V槽切削
- 适合一般铣床，CNC铣床，CNC车床，钻床倒角

- ★ This cutter can be 45° cutting, chamfering can be done.
- ★ Suitable for general milling machine, integrated machining center.

零配件 (Spare Parts): P01-P04

### SB-45° 倒角刀

Chamfering

- 用于内外倒角加工，端面槽加工
- 刀片形状为正方形，使用时可转位4次，更经济

- ★ For internal and external chamfering processing, end-groove.
- ★ Blade shape is square, use indexable four times more economical.

零配件 (Spare Parts): P01-P04

### SSK45° 舍弃式倒角刀

SSK45° Discarding Chamfering

- 本铣刀可45° 切削，亦可做倒角，V槽切削
- 适合一般铣床，CNC铣床，CNC车床，钻床倒角

- ★ This cutter can be 45° cutting, chamfering can be done.
- ★ Suitable for general milling machine, integrated machining center.

■ BMC/MC 倒角刀  
BMC/MC Chamfering

零配件 (Spare Parts): P01-P04

- 多种角度，适用孔背及反边倒角，减少二次装夹，省时高效！
- ★ A Ariety Of Angles, Applicable Hole Back And The Edge Chamfer, Reduce Secondary Clamping, Time Efficient!

■ 倒拉倒角刀  
Inverted Chamfering

- 不用正反转，减少损坏概率
- 特殊设计本体刚性最佳
- ★ No need for reverse running of spindles that minimizes defect of tool.
- ★ Specially designed body gives maximum rigidity.

■ APK 玉米立铣刀杆

APK Corn End Milling Cutter

切削参数 (Cutting Parameters): D51  
零配件 (Spare Parts): P01-P04

- 高效能型粗铣刀，能加工深孔。
- 尺寸可由刀杆随意变换深度，发挥最大效能。
- ★ High-performance-based rough milling, deep hole can be processed.
- ★ Arbor size can be arbitrarily change the depth of maximum efficiency.

■ SPM 玉米立铣刀杆  
SPM Corn End Mill

切削参数 (Cutting Parameters): D51  
零配件 (Spare Parts): P01-P04

- 高效能型粗铣刀，能加工深孔。
- 尺寸可由刀杆随意变换深度，发挥最大效能。

- ★ High-performance-based rough milling, deep hole can be processed.
- ★ Arbor size can be arbitrarily change the depth of maximum efficiency.

■ SPC 整体式玉米型粗铣刀  
SPC Integral Type Maize Rough Milling Cutter

切削参数 (Cutting Parameters): D51  
零配件 (Spare Parts): P01-P04

- 整体式结构，切削刚性更好！
- 多种切深长度，灵活选择。
- ★ The overall structure, cutting better rigidity!
- ★ A variety of cutting length, flexible choice.

配件(Accessory):  
刀片: LPMT1504..  
SPMT1204..  
螺钉: M5X12  
扳手: T20

■ SKS型 快进给面铣刀盘

切割参数 (Cutting Parameters): R20  
零配件 (Spare Parts): P01-P04

●使用15°正角刀片  
●双重夹紧机构刚性好  
●最适合大进给切削  
●具有标准冷却孔  
●刀片为特殊形状的3刃角型号

★ The use of 11° positive angle blade  
★ Double clamping body rigidity  
★ The most suitable for large-feed cutting  
★ With standard cooling holes  
★ 3 for special shaped blade edge angle

低转速, 高进给  
切削效率是普通圆鼻面铣刀盘的3倍  
锥形设计, 钢性高

Low-speed, high feed  
Cutting efficiency of an ordinary cutter round nose and face plate 3 times  
Cone design, steel high

■ HEP 系列七角面铣刀盘  
HEP Series Seven Angle Face Milling Cutter

切割参数 (Cutting Parameters): R19-R21  
零配件 (Spare Parts): P01-P04

● 高效大进给, 七角经济性好!  
★ High feed, seven angle good economy!

### ■ TXP型 快进给面铣刀盘

## FastFeed Face Milling Cutter

- 使用11°正角刀片
  - 双重夹紧机构刚性好
  - 最适合大进给切削
  - 具有标准冷却孔
  - 刀片为特殊形状的3刃角型号
- ★ The use of 11° positive angle blade
  - ★ Double clamping body rigidity
  - ★ The most suitable for large-feed cutting
  - ★ With standard cooling holes
  - ★ 3 for special shaped blade edge angle

■ **KSHR 12角刀盘**  
KSHR 12 Angle Cutter

- 每个刀片12个切削刃
- 内冷标准
- 切削轻快

- ★ Each blade 12 cutting edges
- ★ Internal cooling standard
- ★ The cutting easy

☞ 切削参数 (Cutting Parameters): R19-R21

### ■ OD八角刀盘

OD Octagonal Cutter

- 采用15° 正角刀片
- 大进给低切削阻力
- 八角刀粒，经济性好

- ★ Using the 15 degree angle blade
- ★ High feed low cutting resistance
- ★ The octagonal tablets, the economy is good

☞ 切削参数 (Cutting Parameters): R19-R21  
零配件 (Spare Parts): P01-P04

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |  |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |  |

 TEBL 机夹式快进给立铣刀-双面四角刀片

Clip-Type Fast Feed End Milling Cutter -Double-Sided Four Corners Insert

特点: 高进给, 高效率

★ Characteristic: High Feed, High Efficiency

零配件 (Spare Parts): P01-P04

KM 机夹式45°平面立铣刀盘  
45° Planar End Milling Cutter Head with Machine Clamp

切削参数 (Cutting Parameters): R15-R18  
零配件 (Spare Parts): P01-P04

- 适配钢件、铸件、铝件多种材质刀片，适切范围广
- 容屑空间大，排屑好
- 可适用平面铣削的精加工
- 大前角，切削负何小
- ★ Fit steel, castings, aluminum pieces of various materials blade, the relevance of a wide range of
- ★ Capacity chip a large space, good chip disposal
- ★ Planar milling finishing applicable
- ★ Large rake angle, cutting a small load

AL-KM 机夹式45°平面立铣刀盘-铝制高光

45° Planar End Milling Cutter Head with Machine Clamp  
-Aluminum High Gloss

切削参数 (Cutting Parameters): R15-R18  
零配件 (Spare Parts): P01-P04

- 特点: 铝材壳体，重量轻，45°高光效率高
- ★ Features: Aluminum Shell, Light Weight, 45° High Polishing Efficiency

■ MFT 锁牙式刀杆系列  
MFT Lock teeth cutter bar series

优点 Advantage

高性能可换刀头和刚性刀柄的组合，在悬长较长的加工中亦可有效抑制振动，与传统钢制刀杆相比加工效率提高了2~5倍。  
加工时间大大缩短，加工成本随之下降。  
刀头的自由组合及其可换性，覆盖从粗加工到精加工的所有加工要求，对刀具的集约化管理具有划时代的意义。  
由于刀柄和刀杆采用螺纹连接，可在机床上方便迅速的更换刀头，降低生产成本。

High-performance interchangeable cutter head and the handle a combination of rigidity, in the long hanging longer processing caneffectively suppress vibration, as compared with traditional steel arbor processing efficiency is improved by 2 ~ 5 times. Significantly reduce processing time, processing costs drop.  
Segment of the free combination and can be changed, coverage from roughing to finishing all the processing requirements, intensive management tool epoch-making significance.  
As the shank and arbor with threaded connections, you can easily and quickly on a replacement machine Cutter, reduce production costs.
